PROFESSIONAL SUMMARY

Full Stack Developer experienced in building and deploying production-grade web applications, microservices, and AI-integrated platforms. Possesses proficiency in Java, Python, Node.js, React.js, Spring Boot, MongoDB, PostgreSQL, and Docker, with hands-on deployment experience on AWS EC2 and AWS Amp...

TECHNICAL SKILLS

Java, Python, JavaScript, Dart, SQL, Bash, React.js, Next.js, Flutter (BLoC), Redux, Tailwind CSS, Bootstrap, i18n, Spring Boot, Node.js, Express.js, REST APIs, Microservices, API Gateway, Kafka, MongoDB, PostgreSQL, MySQL, AWS (EC2, Amplify), Firebase, Docker, Git, GitHub, CI/CD, Maven, JWT, Spring Security, BCrypt, RBAC, OTP Auth

WORK EXPERIENCE

Software Engineering Virtual Experience (Forage) - JPMorgan Chase & Co.

October 2025

- Explored REST API integration and basic Kafka-based event messaging through hands-on software engineering simulation tasks.
- Participated in backend workflow implementation and collaborative code review activities within a practical development environment.

AI-ML Virtual Internship - AICTE EduSkills & AWS Academy

April – June 2025

- Engaged with AI/ML fundamentals, Python-based data processing, and cloud-based ML workflow concepts through hands-on virtual internship tasks.
- Gained exposure to machine learning pipelines, data preprocessing, and basic AWS cloud integration for AI applications.

PROJECTS

AI-Driven Decision Intelligence Platform

Python, Flask, Flutter, LangChain, LLMs, RAG, PostgreSQL, AWS EC2, Firebase, Groq API

- Developed an AI-powered decision intelligence platform utilizing LangChain, REST APIs, and LLMs (Mistral, Qwen) for forecasting, AI chat, document understanding, and recommendation workflows.
- Designed modular backend workflows, integrating Groq API-based inference for live deployment and testing open-source models on Google Colab for AI-driven analysis.
- Engineered full-stack architecture with JWT-secured REST APIs and a Flutter BLoC mobile & web frontend, managing end-to-end system design to production deployment on AWS EC2 and Firebase.

Freelance – Gramflix | Referral & Wallet System

Java, Spring Boot, Next.js, MongoDB, Docker, JWT, Spring Security, AWS EC2, AWS Amplify

- Designed a multi-tier referral and earning engine with real-time wallet crediting, parent-child linking, and milestone tracking using a Spring Boot service layer.
- Developed JWT + Spring Security stateless authentication with OTP, BCrypt, and RBAC; implemented a digital wallet with credit/debit, withdrawal pipeline, admin approval, and a MongoDB audit trail, serving 180+ active users.
- Deployed backend services using Docker on AWS EC2 and frontend on AWS Amplify, following a controller-service-repository pattern with testable REST APIs.

CERTIFICATIONS & ACHIEVEMENTS

- NPTEL IIT Kharagpur – Java | Elite
- NPTEL IIT Madras – Database Systems
- Adobe Hackathon Participant

EDUCATION

B.Tech ECE - JIS College of Engineering | 7.63

2023 – 2027

Intermediate - S.S College Jehanabad | 74%

2022

Matriculation - Kainat International School | 79%

2020

ACHIEVEMENTS

- Solved 400+ DSA problems across LeetCode & GFG
- 130+ day active streak on LeetCode & GFG — consistently solving Problem of the Day on both platforms
